

Pharmacy First: Online information sources for patients

When pharmacists are providing a consultation for one of the seven Pharmacy First clinical pathways, there are several leaflets/websites for patients to be pointed to which are listed in the Patient Group Directions (PGDs) and treatment protocol.

This resource lists all the patient-facing leaflets/website links listed in the PGDs and treatment protocol, excluding the marketing authorisation holder's patient information leaflets (hard copies will be available within the medicine's packaging, with copies also being available from [medicines.org.uk/emc](https://www.medicines.org.uk/emc)).

Hyperlinks to the leaflets/websites are listed below, alongside QR codes for each leaflet/website so patients can scan this to access the resource/website link on their mobile phones.

Urinary tract infection (UTI)

Resource to be provided/website to signpost to if the patient is suspected of having a UTI (whether a supply of a medicine is made or not)

[TARGET Treating Your Infection Urinary Tract Infection patient information leaflet](#)

This is also available in other languages.

[Information on the NHS website on urinary tract infections](#)

Additional resource to be utilised/website page to signpost to if a medicine is supplied

[TARGET antibiotic checklist](#)

This is also available in other languages.

[Information on the NHS website on sepsis](#)
